

## AMENDMENTS TO THE CLAIMS

Claims 1-34 (Cancelled).

35. (Currently Amended) The drawer of claim 34, A drawer comprising:  
two drawer frame members;  
a rear wall attached to said drawer frame members;  
a drawer bottom between said drawer frame members; and  
a front facing panel adjustably attached to said drawer frame members, said front facing  
panel including at least two panel portions adjustable relative to one another and arranged so that  
said front facing panel is angled inwardly;

wherein said panel portions are connected together by a fitment;  
wherein said fitment includes at least two angle portions screwed to each other; and  
wherein a first one of said angle portions has vertical slots, a second one of said angle  
portions has horizontal and vertical slots, and a third one of said angle portions has horizontal  
slots and round holes.

36. (Currently Amended) The drawer of claim 33, A drawer comprising:  
two drawer frame members;  
a rear wall attached to said drawer frame members;  
a drawer bottom between said drawer frame members; and  
a front facing panel adjustably attached to said drawer frame members, said front facing  
panel including at least two panel portions adjustable relative to one another and arranged so that  
said front facing panel is angled inwardly;

wherein said panel portions are connected together by a fitment; and  
wherein said fitment includes three angle portions, two of said three angle portions each  
being connected to a respective one of said panel portions, and a third angle portion being  
connected to said drawer bottom.

37. (Previously Presented) The drawer of claim 36, wherein said angle portions are  
connected by a screw.

38. (Previously Presented) The drawer of claim 36, wherein said third angle portion has two lateral angled limbs against which said two of said three angle portions bear.

39. (Previously Presented) The drawer of claim 36, wherein a first one of said angle portions has vertical slots, a second one of said angle portions has horizontal and vertical slots, and a third one of said angle portions has horizontal slots and round holes.

Claims 40-50 (Cancelled).

51. (Previously Presented) A drawer comprising:  
two drawer frame members;  
a rear wall attached to said drawer frame members;  
a drawer bottom between said drawer frame members; and  
a front facing panel adjustably attached to said drawer frame members, said front facing panel including at least two panel portions connected to each other by a fitment, said fitment including a first angle portion connected to a first one of said panel portions, a second angle portion connected to a second one of said panel portions, and a third angle portion connected to said drawer bottom.

52. (Previously Presented) The drawer of claim 51, wherein said third angle portion has two lateral angled limbs against which said first angle portion and said second angle portion bear.
